AMERICAN ACADEMY OF NEUROLOGY

COVID-19 and Vaccination in the Setting of Neurologic Disease: An Emerging Issue in Neurology

<https://n.neurology.org/content/early/2021/07/29/WNL.0000000000012578/tab-article-info>

“...However, the rapidity of approval, and history of prior vaccination regimens resulting in neurological and other complications, creates concern surrounding widespread vaccination. This is particularly so in groups with pre-existing neurological conditions...”

“Though neurological side effects were not more commonly observed following active vaccine over the extended follow-up period for any of the vaccines, a number of neurological complications of these vaccines are now being reported in the most comprehensive registry, the Vaccine Adverse Events Reporting System (VAERS) database. These include **strokes, cranial neuropathies including Bell’s palsy, tinnitus and trigeminal neuralgia, peripheral neuropathies, dysautonomia, acute disseminated encephalomyelitis, transverse myelitis and AIDP**. Case reports are also starting to emerge in the published literature, and the popular press. Most recently, the possibility of increased risk of **AIDP in the weeks following vaccination** was formally added to the label for the Johnson and Johnson vaccine. These complications are rare when compared to the large number of vaccinated individuals; however, it is too early to know the true incidence and risk factors for these complications. They are thought to be **immune mediated and early recognition and treatment with immunomodulatory therapies might be warranted...**

“Prior studies have shed light on the likelihood of **neurological complications following vaccination**. These data can be difficult to interpret and are often seen as controversial, suffering from potential reporting bias and lack of clear causality, but illustrate theoretical **concerns for both patients and physicians and must be acknowledged.**”

AMERICAN SOCIETY OF HEMATOLOGY

Thrombosis with Thrombocytopenia Syndrome (also termed Vaccine-induced Thrombotic Thrombocytopenia) - Diagnoses and Treatment

<https://www.hematology.org/covid-19/vaccine-induced-immune-thrombotic-thrombocytopenia?fbclid=IwAR2vih2zjmF7k1TeSHHdYSfdEk0ZQKHp7oae-ksakg6lhTV-s3zYfeJ0VWg>

“If thrombocytopenia or thrombosis are present, recommend **urgent consultation** from hematologist with expertise in hemostasis. **Avoid use of heparin until TTS has been ruled out** or until an alternative other plausible diagnosis has been made. Knowledge about TTS continues to evolve, and updates will be made as new data become available.

“To date, TTS appears far more likely following AstraZeneca/Johnson and Johnson adenoviral vaccines than Moderna/Pfizer mRNA vaccines..”

Journal of the American Medical Association

Concerns for Myocarditis and Perimyocarditis Underreporting, review of 40 hospitals:

<https://jamanetwork.com/journals/jama/fullarticle/2782900>

MAYO CLINIC

COVID-19 Vaccine Precautions

<https://www.mayoclinic.org/drugs-supplements/sars-cov-2-covid-19-vaccine-mrna-1np-spike-protein-moderna-intramuscular-route/precautions/drg-20505150>

“This vaccine may cause serious **allergic reactions, including anaphylaxis**, which can be life-threatening and requires immediate medical attention. Tell your doctor right away if you have a **rash, itching, a fast heartbeat, trouble breathing, trouble swallowing, or any swelling of your hands, face, or mouth** after receiving the vaccine.

“This vaccine may increase your risk of **serious heart problems (eg, myocarditis, pericarditis)**, especially after you receive the second dose. Check with your doctor right away if you have **anxiety, blue or pale skin, chest pain, possibly moving to the left arm, neck, or shoulder, fever, chills, a fast heartbeat, trouble breathing, or unusual tiredness or weakness**.

“**Fainting** may occur after you receive this vaccine. You may also have **vision changes, numbness or tingling in your arms, hands, or feet, or jerky movements of the arms and legs**. Your doctor may want you to be observed after you get the injection to prevent and manage fainting.

“This vaccine may not protect everyone who receives it...”

GOVERNMENT OF CANADA

Reported side effects following COVID-19 vaccination in Canada (reported adverse events of special interest)

<https://health-infobase.canada.ca/covid-19/vaccine-safety/>

Auto-immune diseases: Guillain-Barré Syndrome, Thrombocytopenia (low blood platelets)

Cardiovascular system: Cardiac arrest, Cardiac failure, Myocardial infarction (heart attack), Myocarditis/Pericarditis (inflammation of the heart muscle and lining around the heart)

Circulatory system: Cerebral venous (sinus) thrombosis, Cerebral thrombosis, Cutaneous vasculitis, Deep vein thrombosis, Embolism, Haemorrhage (bleeding), Pulmonary embolism, Thrombosis (blood clot), Thrombosis with thrombocytopenia syndrome (blood clot with low platelets)

Hepato-gastrointestinal and renal system: Acute kidney injury, Glomerulonephritis (kidney inflammation) and nephrotic syndrome (kidney disorder), Liver injury

Nerves and central nervous system: Bell's Palsy/ facial paralysis, Cerebrovascular accident (stroke), Transverse myelitis (inflammation of spinal cord) Anaphylaxis

Pregnancy outcomes: Fetal growth restriction, Spontaneous abortion

Respiratory system: Acute respiratory distress syndrome

Skin and mucous membrane, bone and joints system: Chilblains, Erythema multiforme (immune skin reaction)

NIH - National Institutes of Health

NIH encourages researchers to investigate reported changes in menstruation after COVID-19 vaccination

<https://covid19.nih.gov/news-and-stories/covid-19-vaccines-and-menstrual-cycle>

WORLD HEALTH ORGANIZATION

<https://www.who.int/emergencies/diseases/novel-coronavirus-2019/covid-19-vaccines/advice>

“Children and adolescents tend to have milder disease compared to adults, so unless they are part of a group at higher risk of severe COVID-19, it is less urgent to vaccinate them than older people, those with chronic health conditions and health workers.

More evidence is needed on the use of the different COVID-19 vaccines in children to be able to make general recommendations on vaccinating children against COVID-19.”

FDA APPROVED COMIRNATY PACKAGE INSERT -

<https://www.fda.gov/media/151707/download>

Cardiac Disorders: myocarditis, pericarditis

Gastrointestinal Disorders: diarrhea, vomiting

Immune System Disorders: severe allergic reactions, including anaphylaxis, and other hypersensitivity reactions (e.g., rash, pruritus, urticaria, angioedema)

Musculoskeletal and Connective Tissue Disorders: pain in extremity

CDC - CLINICAL CONSIDERATIONS

<https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html>

People with a history of Guillain-Barré syndrome

“Reports of adverse events following use of the Janssen COVID-19 vaccine under EUA suggest an increased risk of GBS during the 42 days following vaccination. No increased risk of GBS has been identified with mRNA vaccines during use under EUA.”

People with a history of Bell’s palsy

“Cases of Bell’s palsy (acute peripheral facial nerve palsy) were reported following vaccination of participants in the COVID-19 vaccine clinical trials...people with a history of Bell’s palsy may receive any currently FDA-authorized COVID-19 vaccine.”

People with a history of dermal filler use

“Infrequently, people who have received dermal fillers might experience swelling at or near the site of filler injection (usually face or lips) following administration of a dose of an mRNA COVID-19 vaccine... The swelling appears to be temporary and resolves with medical treatment, including corticosteroid therapy.”

People with a history of thrombosis or risk factors for thrombosis

“Although the etiology of TTS associated with the Janssen COVID-19 vaccine is unclear, it appears to be similar to another **rare immune-mediated syndrome**, heparin-induced thrombocytopenia (HIT). Until more information becomes available, experts advise that people with a history of an episode of an immune-mediated syndrome characterized by thrombosis and thrombocytopenia, such as HIT, should be offered another currently FDA-authorized COVID-19 vaccine (i.e., mRNA vaccine) if it has been ≤ 90 days since their TTS resolved. After 90 days, patients may be vaccinated with any currently FDA-authorized COVID-19 vaccine.

Venous thromboembolism (VTE), defined as deep vein thrombosis, pulmonary embolism, or both, are common. The biologic mechanisms for VTE (as well as arterial thrombi) differ from the underlying immune-mediated mechanism for HIT...

People with a history of myocarditis or pericarditis

“Myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining around the heart) have occurred in some people following receipt of mRNA COVID-19 vaccines (Pfizer-BioNTech and Moderna)... Cases of myocarditis or pericarditis have occurred predominantly in males aged 12-29 years within a few days after receiving the second dose of vaccine. **Most patients have required hospitalization with resolution of acute symptoms. Follow-up is ongoing to identify and understand potential long-term outcomes among cases.**

“There are limited data on the safety and efficacy of COVID-19 vaccines in people with a history of myocarditis or pericarditis...

“Myocarditis or pericarditis after receipt of the first dose of an mRNA COVID-19 vaccine series but before administration of the second dose... It is unclear if people who developed myocarditis or pericarditis after a first dose of an mRNA COVID-19 vaccine may be at increased risk of further adverse cardiac effects following a second dose of the vaccine. Until additional safety data are available, experts recommend that people who develop myocarditis or pericarditis after a first dose of an mRNA COVID-19 vaccine defer receiving the second dose.

“People with a history of myocarditis or pericarditis who choose to receive the second dose of an mRNA COVID-19 vaccine should wait at least until their episode of myocarditis or pericarditis has completely resolved.”

Considerations involving pregnancy, lactation, and fertility

“...women aged <50 years should be aware of the rare risk of TTS after receipt of the Janssen COVID-19 vaccine and the availability of other currently FDA-authorized COVID-19 vaccines (i.e., mRNA vaccines) for which this risk has not been seen...There is no evidence that any of the COVID-19 vaccines affect current or future fertility.”

COVID VACCINES ARE NOT FREE OF NEUROLOGICAL SIDE EFFECTS

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8206845/>

“...The most common neurological symptoms included **dizziness, headache, pain, muscle spasms, myalgia and paresthesias**, which are expected to occur as acute, transient effects of the vaccination. Rare cases of **tremor, diplopia, tinnitus, dysphonia, seizures and reactivation of herpes zoster have been also reported**. There were also cases of **stroke, GBS, facial palsy, transverse myelitis and acute disseminated encephalomyelitis (ADEM)** in the VAERS

database...In the coronavirus vaccine trial, 2 patients with **transverse myelitis** were reported. **Facial palsy** has been also reported in a study of patients undergoing a SARS-CoV-2 vaccination with mRNA-based vaccines. There is also one report about a **deep venous thrombosis (DVT)** following the second dose of an mRNA vaccine. Since DVT is a potential risk factor for ischemic stroke in case of a patent foramen ovale (PFO), **we should recognize** that venous thrombosis as a potential side effect of SARS-CoV-2 vaccines **may secondarily concern also the neurologist**.

“In addition to these publications, we observed several patients with **neurological compromise**, in whom it was conceivable that neurological compromise was causally related to a recent SARS-CoV-2 vaccination.”

Resistant pruritis skin rash following Pfizer: <https://pubmed.ncbi.nlm.nih.gov/34358176/>

Necrotic eschars at injection sites one week after 2nd dose of Pfizer: <https://pubmed.ncbi.nlm.nih.gov/34337117/>

Facial Pustular Neutrophilic Eruption following mRNA vaccine: <https://pubmed.ncbi.nlm.nih.gov/34319363/>

Delayed local skin reactions: https://www.nejm.org/doi/full/10.1056/NEJMc2102131?fbclid=IwAR0P6wjXiO4swT4wz0IEJCBx7v14e2Si-O9AbOuhIVisVHFhc_kGEy7pyj0

Additional 12 Patients with Delayed Local Reactions:
<https://www.nejm.org/doi/full/10.1056/NEJMc2102131>

16 patients delayed hypersensitivity reactions after Moderna:
<https://jamanetwork.com/journals/jamadermatology/fullarticle/2779643>

138 Delayed Hypersensitivity Reactions following vaccination:
<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8294276/>

Delayed local Hypersensitivity reactions: a 6 month retrospective study:
<https://pubmed.ncbi.nlm.nih.gov/34288056/>

2 cases of delayed local reactions following Moderna: https://journals.lww.com/infectdis/Fulltext/2021/07000/Delayed_Skin_Rash_After_Receiving_SARS_CoV_2_mRNA.19.aspx

13 cases delayed local reactions following mRNA vaccine: <https://academic.oup.com/cid/advance-article/doi/10.1093/cid/ciab518/6291929>

COVID Vaccine arm: <https://www.psychologytoday.com/us/blog/heal-the-mind-heal-the-body/202101/what-s-the-new-phenomenon-called-covid-vaccine-arm>

COVID arm following Moderna: histologic features: <https://pubmed.ncbi.nlm.nih.gov/34242422/>

405 cases of dermatologic reactions following Pfizer, Moderna, and Astra Zeneca: <https://pubmed.ncbi.nlm.nih.gov/34254291/>

Erythema Migrans like rash after Moderna: <https://pubmed.ncbi.nlm.nih.gov/34250736/>

Bullous Drug Eruption Rash following Moderna: <https://pubmed.ncbi.nlm.nih.gov/34294590/>

Bullous eruption following Pfizer: <https://pubmed.ncbi.nlm.nih.gov/34416058/>

Soft Tissue Filler Inflammatory Reaction after vaccination:
<https://pubmed.ncbi.nlm.nih.gov/34174156/>

Immune Response to fillers and breast implants after vaccination: <https://pubmed.ncbi.nlm.nih.gov/34174765/>

Breast Implant seroma after mRNA vaccine: <https://pubmed.ncbi.nlm.nih.gov/34405902/>

L Breast Implant Capsular Contracture following Moderna vaccination: <https://pubmed.ncbi.nlm.nih.gov/34373851/>

COVID-toes after mRNA vaccination:
<https://pubmed.ncbi.nlm.nih.gov/34162525/>

Leukoclastic vasculitis: <https://onlinelibrary.wiley.com/doi/abs/10.1002/art.41910>

Leukoclastic vasculitis: <https://onlinelibrary.wiley.com/doi/abs/10.1002/art.41910>

Urticarial Vasculitis: <https://pubmed.ncbi.nlm.nih.gov/34369046/>

Urticarial Vasculitis following vaccination: https://journals.lww.com/amjdermatopathology/Citation/9000/Unique_Case_of_Urticarial_Skin_Eruptions_After.97698.aspx

Small vessel vasculitis after Astra Zeneca: <https://pubmed.ncbi.nlm.nih.gov/34310763/>

Cutaneous small vessel vasculitis following J&J: <https://pubmed.ncbi.nlm.nih.gov/34337124/>

Moderna Vaccine Induced Skin Rash: <https://pubmed.ncbi.nlm.nih.gov/34423142/>

A narrative review of cutaneous and hypersensitivity reactions: <https://pubmed.ncbi.nlm.nih.gov/34424434/>

A Case series of Cutaneous vaccine reactions at Loma Linda University: <https://pubmed.ncbi.nlm.nih.gov/34423106/>

Cutaneous lymphocytic vasculitis following mRNA vaccine: <https://pubmed.ncbi.nlm.nih.gov/34327795/>

Pfizer induced reactivation of varicella and resulting small vessel vasculitis:
<https://pubmed.ncbi.nlm.nih.gov/34310759/>

2 cases of skin color discoloration following mRNA vaccination: <https://pubmed.ncbi.nlm.nih.gov/34310755/>

A case series of rare cutaneous adverse events following vaccination: <https://pubmed.ncbi.nlm.nih.gov/34363637/>

3 cases of vesiculobullous non-IgE-mediated cutaneous reactions to Pfizer: <https://pubmed.ncbi.nlm.nih.gov/34363258/>

Miscellaneous:

Lipschutz ulcers after AstraZeneca: <https://pubmed.ncbi.nlm.nih.gov/34366434/>

Multisystem inflammatory syndrome in an adult following Pfizer (MIS-V): <https://pubmed.ncbi.nlm.nih.gov/34326117/>

Perturbation of blood glucose following vaccination, a review of 20 adults: <https://pubmed.ncbi.nlm.nih.gov/34375490/>

Rhabdomyolysis after Moderna: <https://pubmed.ncbi.nlm.nih.gov/34150372/>

Vaccine induced interstitial lung disease in 86yoM after mRNA vaccine: <https://pubmed.ncbi.nlm.nih.gov/34362838/>

Rhabdomyolysis after Moderna: <https://pubmed.ncbi.nlm.nih.gov/34150372/>

Rebuttal about Functional Neurologic Disorders and Vaccination: https://onlinelibrary.wiley.com/doi/full/10.1002/ana.26160?fbclid=IwAR3C-QQc-ZDEDoCu0fWNQuVYzvbC3qYHGekCaicU5-l_bOUz4N52jl1wjJO

International call for vaccine adverse reaction investigation:
